

Hanging instructions

We have provided a hook with 3M Command™ removable adhesive strip. To hang **Box Mount** and **Gallery Wrap** prints, mark the wall about 64 inches from the floor, centered where you want the picture. Clean the wall with isopropyl rubbing alcohol (provided) and let dry. Remove black liner from Command adhesive strip then press against wall and hold for 30 seconds. It may not hold well on some surfaces, in which case you can attach the hook using a nail.

To remove, hold hook with one hand while pulling and stretching the tab *straight down* (not out from the wall and not sideways) about 12 inches until the hook is released. (It is important to hold hook with other hand so it does not snap at you when released.) This should not damage the wall. A spare Command strip is provided and you can purchase more in a drug store or homeowner store (buy the Medium-size 3M Command strip).

Care instructions

Don't touch the print surface with your fingers or a hard object. Start by dusting with a clean dry cotton cloth or clean soft brush. If you use a brush, wash it first with soap and water. After dusting, wipe the print surface with a clean damp soft cotton cloth. Do not use any soap or cleaning agent.

Warranty

This print and mounting are made of high quality materials and should last a very long time. If the print fades, changes color, shows defects in mounting, or is damaged in shipment, return it to us for a free replacement. If it gets damaged after arrival, we will replace it, charging you only half our current price. We will keep the digital file unless you request otherwise.
